

Software

Since many years, I am a supporter, and, to some extent, a contributor of [free software](#), for example in the sense of the [Free Software Foundation](#). This page contains the following software, written by myself:

- [Harc](#), a system of utilities for Home Automation and Remote Control,
- [Gnans](#), a simulation program for dynamical systems, and
- [The Einstein Puzzle](#), a treatise on a famous puzzle (-family).
- [lirc2xml](#), a program for extracting information from Lirc configuration files.

In all cases, the software can be used, redistributed, modified etc in accordance with the [GNU General Public License](#).
